

Scheduler

Managing the daily operations of a facility can be a monumental task when the efficiency of the institution relies on synchronized activities and coordinated schedules. TerraManager addresses this concern by providing an intuitive and robust Scheduler that ensures timely and accurate notification to occupants and staff. TerraManager Scheduler delivers the ease of a Windows based Calendar with the dynamics of a flexible schedule builder, providing facility directors and school administrators with the ability to create, edit, control and manage the timed events that ensure a smooth running facility.

- Scheduler allows multiple schedules to be programmed via a simple Windows calendar interface
- Scheduled events trigger a myriad of functions; playback of pre-recorded messages, initiation of alert tones and bells, broadcast of background music, and activation of command strings for logic control
- Schedules can be programmed to target a single device or zone on the network, any group of devices or zones, and/or all devices and zones as required
- Schedules can be assigned priorities and configured to run concurrently

The Day Scheduler provides the ability to configure a day's events to meet the needs of any institution. From this configurator, school administration can:

Name	Trigger Time	Action
Day Scheduler1	08:00:00	Message 2
Day Scheduler 2	08:30:00	COMMAND
Day Scheduler 3	10:00:00	Message 123
	11:00:01	Message 2
	12:00:04	Message 2
	13:00:03	Message 123
	15:00:02	Message 123
	17:00:05	COMMAND

- Assign an audio announcement to start and end the day or play pre-recorded messages at specific times
- Schedule timed tones to signify class change, lunch period, or testing time start and end
- Initiate control commands to lock doors, turn on lights, etc.
- Play background music during passing periods.
- Change event times as required or delete events as needed

Scheduler

The Schedule configurator is simple to use with intuitive parameters. The command screen provides drop down windows and check boxes for easy selection of dates, times, days of the week, etc.. The Scheduler screen also provides a notes section for logging of important schedule details or descriptions, making it easier for the system user to select the correct schedule of events.

Key Features:

- Drop down windows and check box selection of features
- Multiple options for configuring the frequency of schedule
- Full text window for customized alpha numeric naming of the schedule
- Notes section for entering of schedule details and description

- Single click to enable or disable an active schedule
- Schedules are easily replaced by checking the box and selecting the desired schedule

- Priority values can be assigned to each schedule (1-99), in case there is a conflict between multiple schedules

TerraManager Scheduler is a powerful and flexible event calendar that provides school administrators with the ability to configure, control, and manage time tone events, pre-recorded voice announcements, broadcast background music, and initiate control commands. With it's user friendly design and intuitive configuration screens, TerraManager Scheduler is the tool needed by every institution for it's smooth and timely operation.
